

## Installing Zoom to your tablet/smart phone (example shown on iPhone)

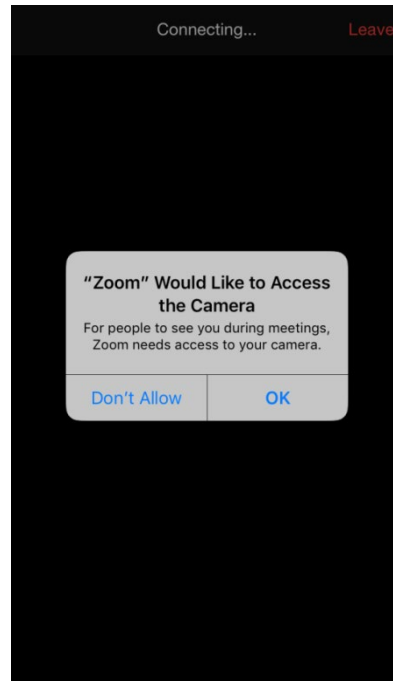

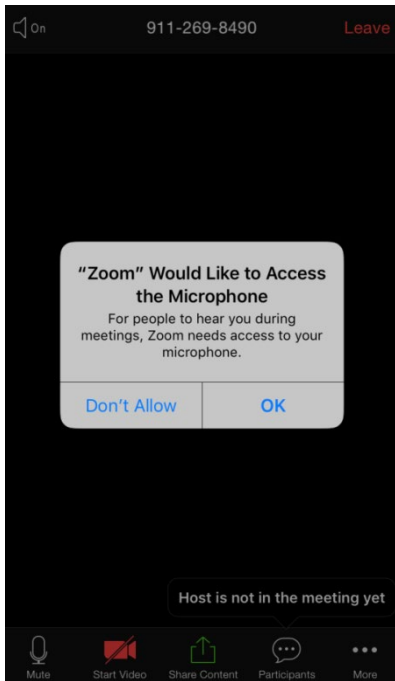

You will need to install the app on your tablet/smartphone before being able to log in to any of the sessions. This can be found on your tablet/smartphones 'App store', this is a free app so you will not incur any charges.

Once the app has been installed and it has been opened, you should see the first page as below.

Similar to logging in on a computer, you will need to enter the **meeting ID** **supplied to you** and enter your name.

Once logged in, the app will ask for access to your camera/microphone, this will need to be authorised by yourself in order for the hub and other spokes to be able to see and hear you contributing to the session.

Once these have both been authorised, your screen should look like the image to the left. The screen will continue to look like this until the host/other participants join the meeting, you will then be able to see who is speaking on the larger screen and you will be a thumbnail in the corner of the page.

## Ending the session

Once the ECHO session has finished the hub site will end the meeting. Zoom can then be closed by clicking on **'Leave'** in the top right hand corner of the screen.
